

How to repair colour loss to Two Tone Finishes

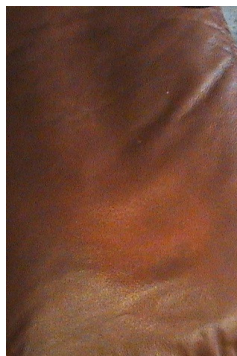

Two Tone leathers are becoming increasingly popular on todays modern leathers but do pose tricky problems for repair technicians.

The solution lies in LTT's unique range of Pigment in a Can and Tinted Finish in a Can. Repairs can be simply achieved by cleverly combining colours to achieve effective quick results saving both time and money

THE REPAIR PROCESS

Damaged two tone

Mexico Pigment in a Can base coat applied

Red Brown Tinted Finish in a Can top coat applied

The finished repair

LTT guarantee

The above photos are an exact reproduction of the colour changes that took place during the repair.

The photos have not been touched or tampered with in any way and the repair has not been computer generated.
